

SMART & HASSLE FREE PICKING

FREE

AS **EASY** AS 1, 2, 3

This app may be small but it's really very useful and powerful, as it serves as a generic picking software that works on any ERP which can import data from a .TXT file.

This app is completely free and easy to setup. All you need to do is setup the method which you wish to send the data (send by email, FTP, local hard drive), and the character which will be used as a field separator, and SmartScan will send your picking list in a TXT format to the destination.

Then all you'll need to do is import the file into your ERP, and you're all set!

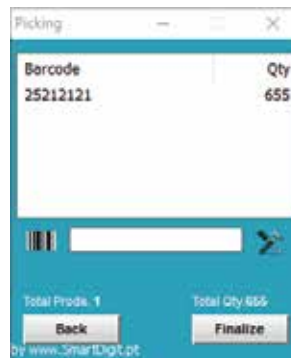

JUMP START PICKING

PICKING LIST

Here you will be able to view all pickings which are already created, create a new list, or delete an existing list by pressing on one of the items on the list.

PICKING

Here, you may insert your products into the list. In order to do that, all you need to do is to insert them manually or using the scanner option, insert the quantity if the item being picked, and pressing Enter. When inserting the code for an item which already exists, you will be prompted with the option to delete it if you wish. You may also choose the quick mode by pressing the Cog Wheel button and selecting the quantity to insert each time.

SETTINGS FOR SENDING

In the settings, you may choose which character will be used to separate the fields in the generated file, select if you wish to send it via e-mail, FTP, to create a file, or all of these options together.
